CSCA 424: INTERNET AND WEB TECHNOLOGIES LAB

Project Title: Ledger project using HTML, CSS, JavaScript, php, MySQL

NAME : PRAYASH PATEL
REG. NO. : 19352041
COURSE : MCA
YEAR : 2nd year & 4th Sem, 2021

Abstract— today, every customer-seller need an app so that they can keep track of their daily expenses, transactions in the easiest way. So, to keep the data easily and efficiently, I have make a “Ledger” project, which is intended to solve daily transactions keeping, retrieving problem between customer-seller in the easiest way by providing a basic explanation of how to do it easily.

Keywords—Ledger project, web-development, HTML, CSS, JavaScript, php, MySQL

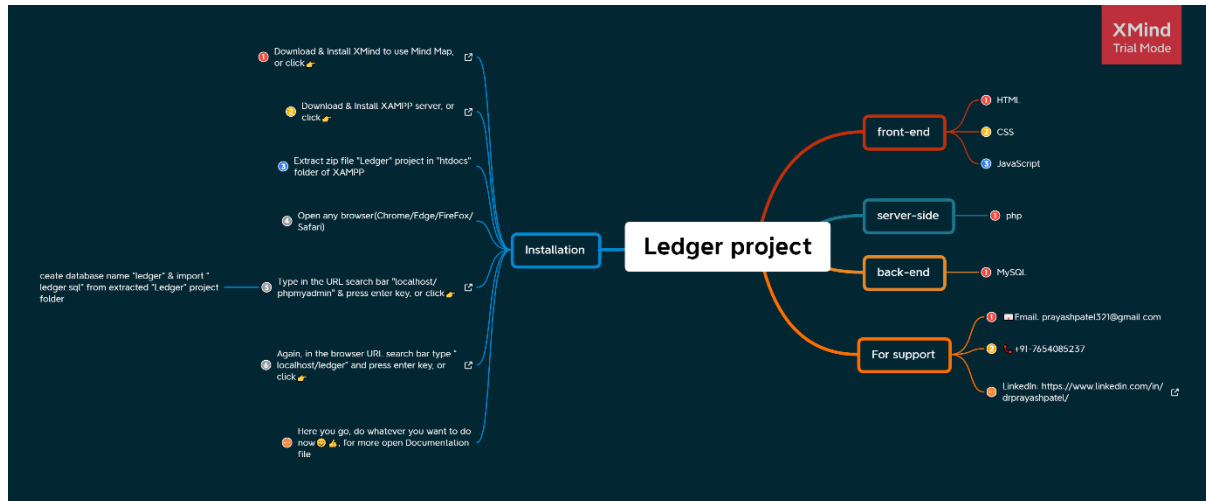

Fig. 1 Overview of how to start working with Ledger project, for more open XMind file

Project description

The Ledger application is intended to solve lots of issues of customer-seller problem of daily record keeping of their transaction/expenditure. I have founded that even in modern applications there are many issues within the app, they are not very user-friendly. A very layman should require more technical knowledge & things to know how application works. So, in the Ledger app, it is a beginning step to solve almost all issues of customers and sellers having features like-

1. **Having ready-made templates for different seller's** like- grocery seller, gold seller, farmers, hardware shopkeeper, software solutions are needed different templates because they buy and sell different kinds and categories of items.
2. **Fully customizable app** for user to use in whichever customized way they want to use.
3. **Emoji along with the items and or background theme of the customer & item** which is in the transactions should be available for easily recognition of the transaction is regarding which item(s) and with which customer.
4. **Voice to text input (command input)**
5. **Also customizable voice command**
6. **App should work in multilingual**
7. **Voice note keeping for illiterate & low vision persons**
8. **Text to voice output**
9. **Easiest search tools**
10. **Multilingual 24×7 customer care support & having regular blogs for tips and tricks**
11. **Cloud storage, automatic SMS payment reminders, accept payments digitally**

12. Secure & Robust and get business promoted and more features

Voce to text input (command input) will be normal English sentences

E.g. to add transaction, user will speak-

Insert into Ledger: 7654085237 Prayash Paid 335 Due 45 Item php Book Today

It should be automatically understood by app and written in the database as

Username	Cname	Paid	Due	Total	Item_Name	Item_Type	Date	Remarks
7654085237	Prayash	335.0	45.0	380.0	php	Book	16/07/2021	NULL

Here, the SQL like command (Insert into Ledger) to activate “Ledger” app.

E.g. to update transaction

Update into Ledger: 7654085237 Paid 45

It should be automatically understood by app and updated in the database as

Username	Cname	Paid	Due	Total	Item_Name	Item_Type	Date	Remarks
7654085237	Prayash	380.0	0.0	380.0	php	Book	16/07/2021	NULL

Here, I considered “Username” as primary key and that’s how updated on the basis of Username

E.g. to delete transaction

Delete from Ledger: 7654085237

It should be automatically understood by app and delete in the database as

Username	Cname	Paid	Due	Total	Item_Name	Item_Type	Date	Remarks
						Matthias Noback		

Considering “Username” as primary key and that’s how can get deleted on the basis of Username

And same thing can be written in Hindi as

उदाहरण, खाते में लिखने के लिए

खाते में लिखो: 7654085237 प्रयास जमा 335 उधार 45 पी-एच-पी किताब

उपभोक्ता	ग्राहक	जमा	उधार	कुल	वस्तु	प्रकार	दिनांक	टिप्पणी
----------	--------	-----	------	-----	-------	--------	--------	---------

7654085237	प्रयास	335.0	45.0	380.0	पी-एच-पी	किताब	16/07/2021	खाली
------------	--------	-------	------	-------	----------	-------	------------	------

Here, by default date will be today date.

उदाहरण, खाते में सुधार के लिए

खाते में सुधार करो: 7654085237 जमा 45

उपभोक्ता	ग्राहक	जमा	उधार	कुल	वस्तु	प्रकार	दिनांक	टिप्पणी
7654085237	प्रयास	380.0	0.0	380.0	पी-एच-पी	किताब	16/07/2021	खाली

उदाहरण, खाते से मिटाने के लिए

खाते से मिटा दो: 7654085237

उपभोक्ता	ग्राहक	जमा	उधार	कुल	वस्तु	प्रकार	दिनांक	टिप्पणी

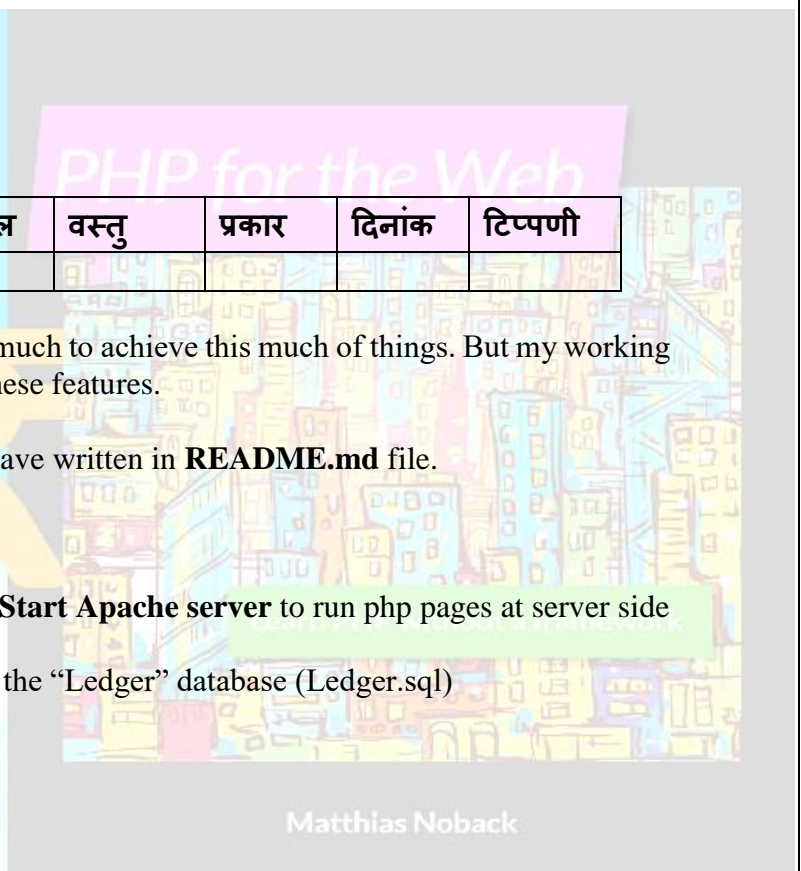

However, in this project I haven't did so much to achieve this much of things. But my working will be to achieve as quicker as to avail these features.

To quickly start to this project, I have written in **README.md** file.

Now, let's begin with working-

After extraction of file "Ledger" project- **Start Apache server** to run php pages at server side

And **start MySQL** to get connected with the "Ledger" database (Ledger.sql)

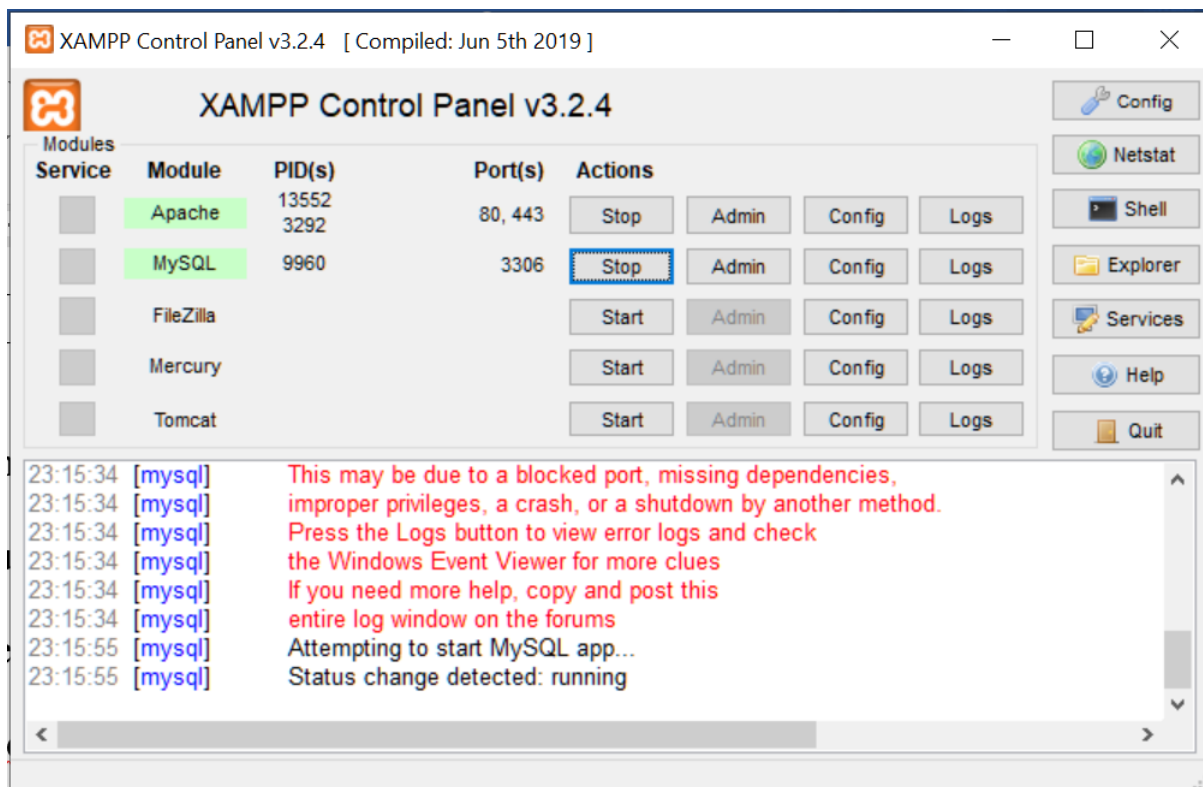

Fig. 2 XAMPP control panel, running Apache server and MySQL database

There, is “**index.php**” file; running this php file through browser, the Brower window look like this👇

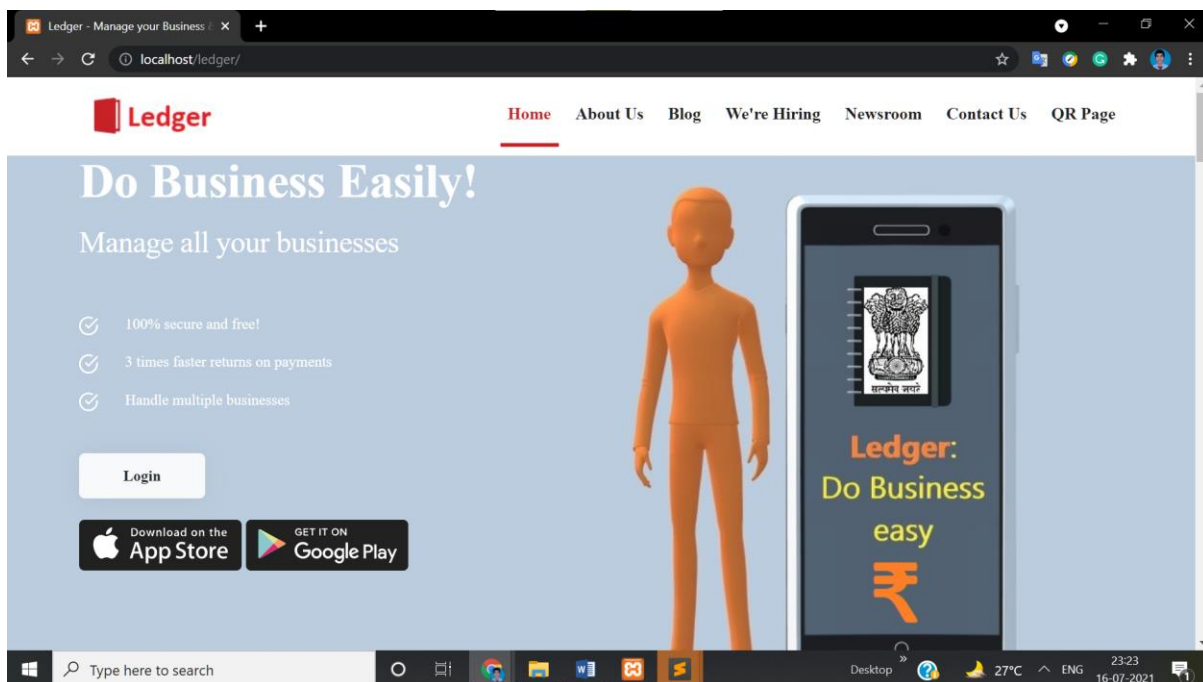

Fig. 3 Ledger website interface, screen-1

Here, we can know about different things of “Ledger” application, like what is Ledger application all about, what’s feature it provides, and more things.

In the “**Contact Us**” section of menu-bar, user will get contact information of the application developer

Fig. 4 Menu-bar in Ledger

1 Contact Us (

Here, click on **Contact Us** to immediately contact with Ledger customer care of any issues 24×7.

Fig. 5 Contact us page of Ledger

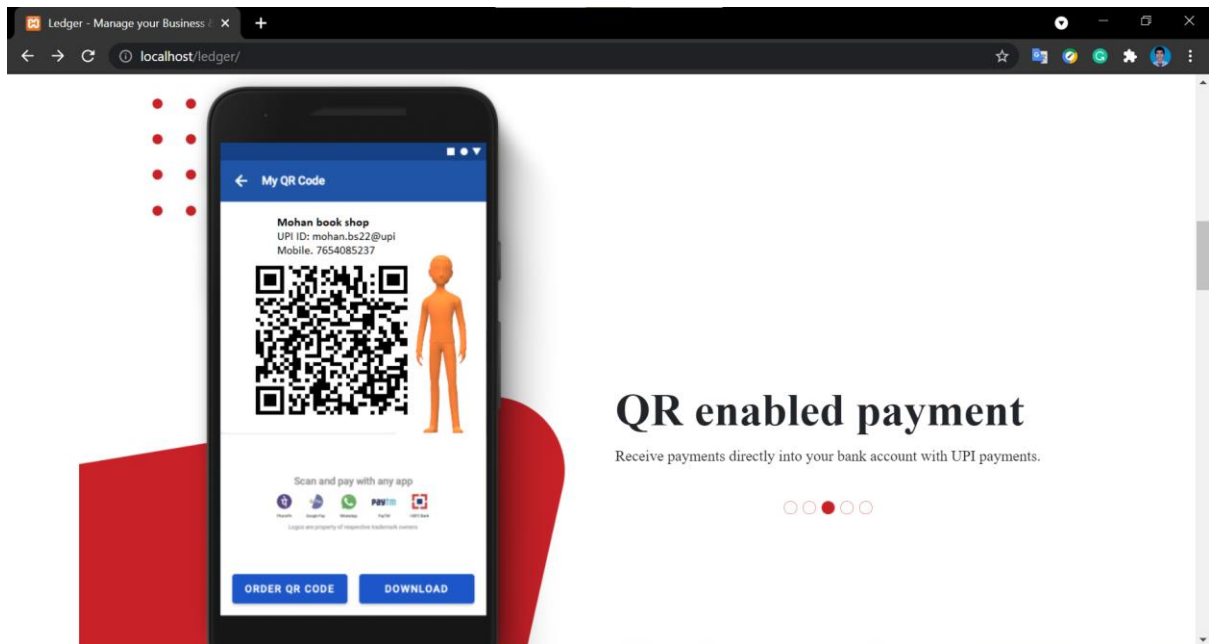

Fig. 6 Highlighting features with carousel items i.e. moveable object

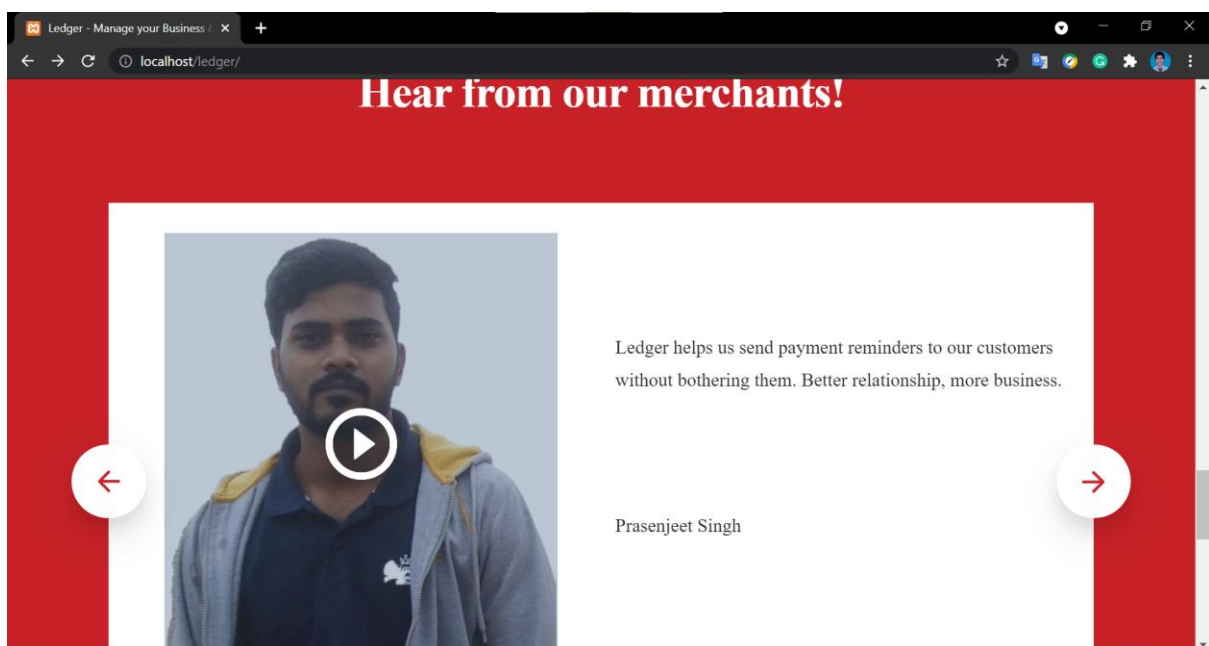

Fig. 7 Getting promotion for Ledger app through customers

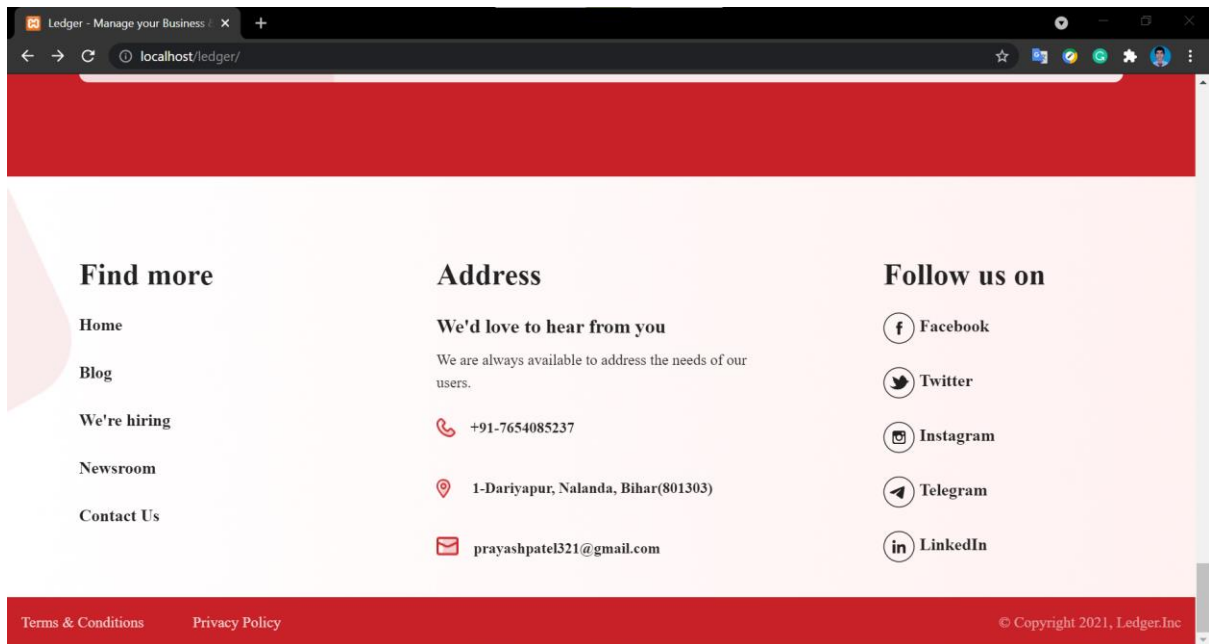

Fig. 8 Footer page containing various shortcuts and links of different section of page, social media and brief address

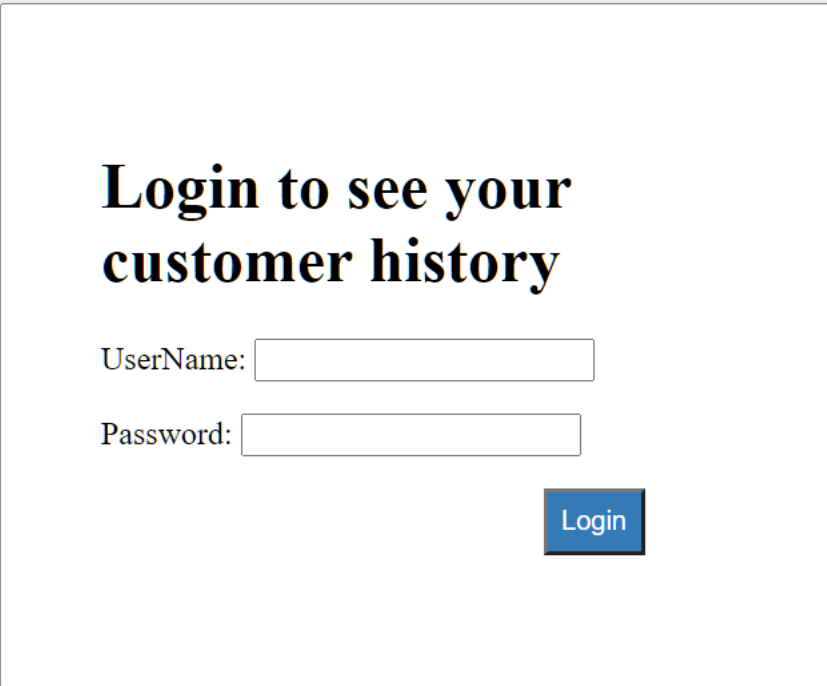

Here, we can add blogs regularly. Because **Blog** posts are great for making our software and its features known to a wide audience of potential users. We can use blog to offer clarifications of what our product does, deliver user-friendly tutorials, tips and tricks, walk-throughs, explain updates, etc. Through it customer will be getting aware form new security issues also.

Now, click on **Login** button to know your money transactions regarding items either you purchased or sold with customer(s) or seller(s).

We will get this 

Login to see your customer history

UserName:

Password:

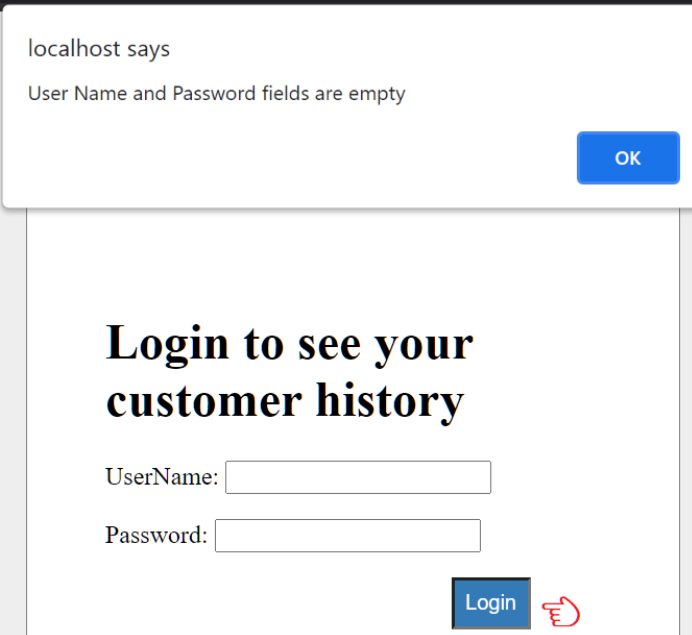

Login

Now we have to **enter our UserName & Password**

Note:- After importing “**ledger.sql**” database file, there the default is-

Username: 7654085237

Password: Pr@7654

localhost says

User Name and Password fields are empty

OK

Login to see your customer history

UserName:

Password:

Login 

Fig. 9 Without entering UserName & Password and clicking Login will show pop-up message of error

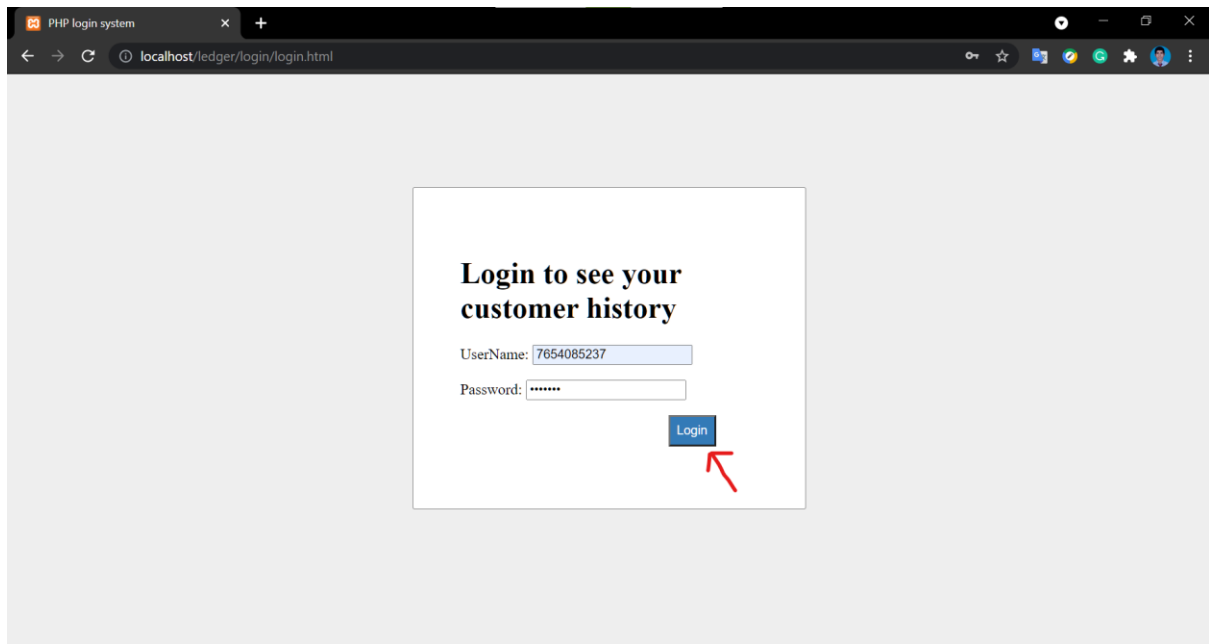

Fig. 10 In the Login screen - entering correct Username & wrong Password, to check what it shows

Now, we will click on **Login** button after entering username and password.

Testing with incorrect password (say “*pra7654*”), the user screen will show

Fig. 11 Showing Username and/or password is incorrect

After, re-entering with correct credentials (say, UserName-**7654085237** & Password-**Pr@7654**), we can see this on the screen from MySQL database (file ledger.sql)

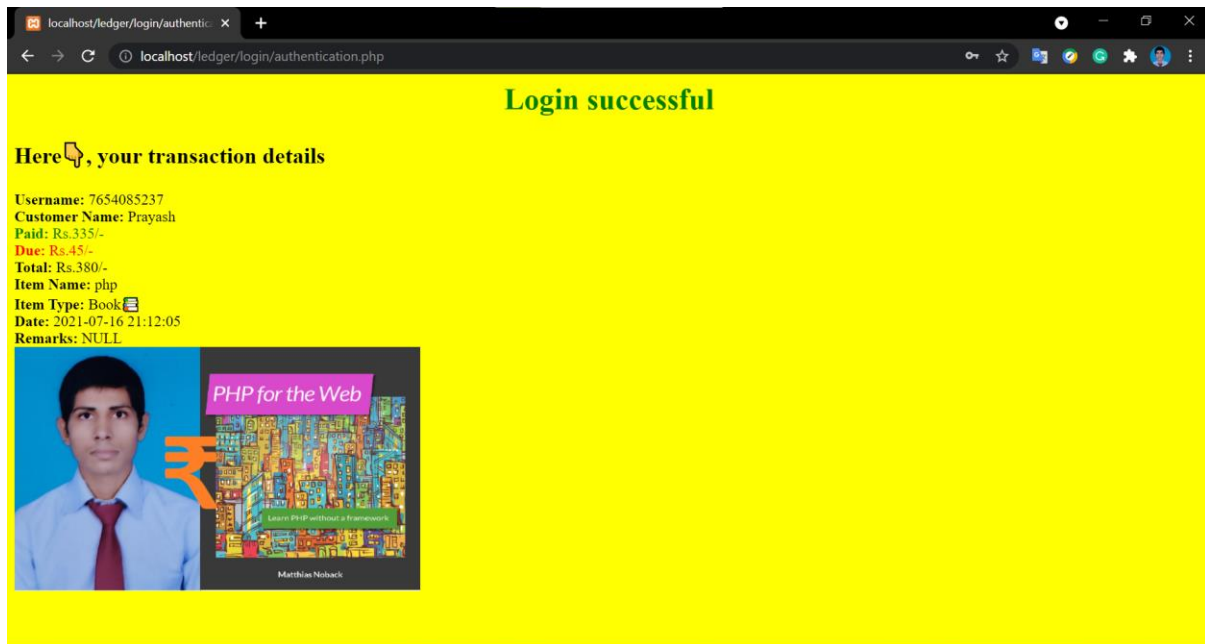

Fig. 12 Showing transaction details in Ledger after successful login

Here, we can easily understand that Customer name “Prayash” whose mobile no.(i.e. unique UserName) has purchased php book and paid only Rs.335/- out of Rs.380/-(having dues of Rs.45/-) on 16th July 2021, Friday at 9:12pm. Paid and due are showing in colours green and red respectively so that user can easily find and understand even with colour. Any additional remarks can also be shown if available. Also, don’t confused with the same login username and customer username in the records of Ledger application, just for testing purpose I have taken it.

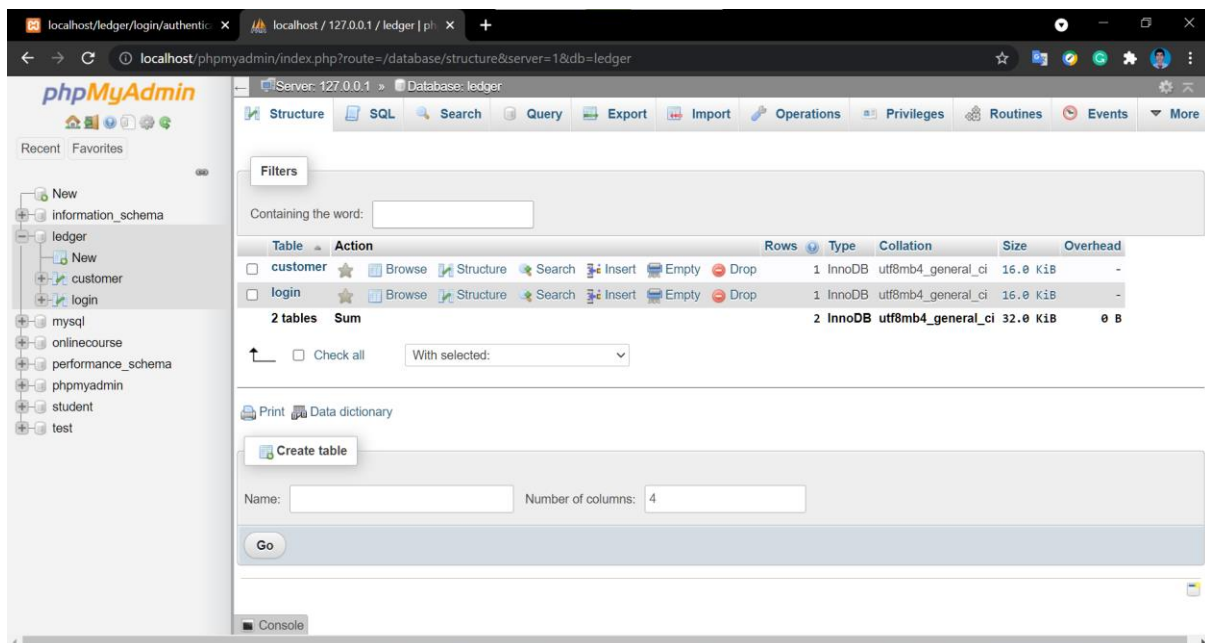

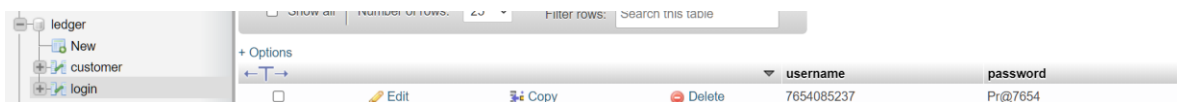

Fig. 13 Ledger database containing two tables- customer & login

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra	Action
1	username	varchar(10)	utf8mb4_general_ci		No	None			Change Drop More
2	password	varchar(8)	utf8mb4_general_ci		No	None			Change Drop More

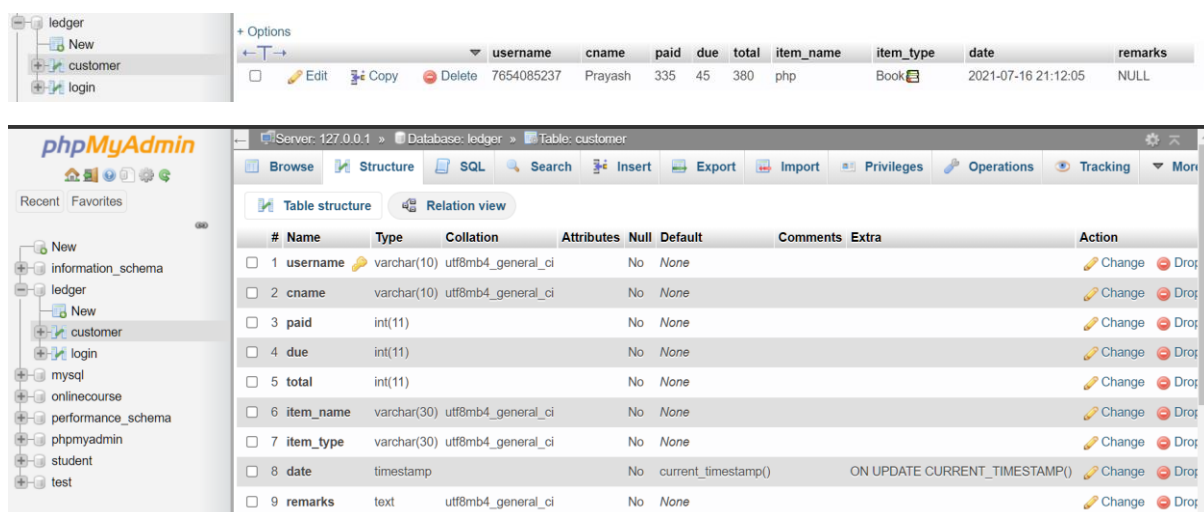

username	password
7654085237	Pr@7654

Fig. 14 login table containing records of users' usernames & passwords

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra	Action
1	username	varchar(10)	utf8mb4_general_ci		No	None			Change Drop More
2	password	varchar(8)	utf8mb4_general_ci		No	None			Change Drop More

Fig. 15 Structure of login table

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra	Action
1	username	varchar(10)	utf8mb4_general_ci		No	None			Change Drop
2	cname	varchar(10)	utf8mb4_general_ci		No	None			Change Drop
3	paid	int(11)			No	None			Change Drop
4	due	int(11)			No	None			Change Drop
5	total	int(11)			No	None			Change Drop
6	item_name	varchar(30)	utf8mb4_general_ci		No	None			Change Drop
7	item_type	varchar(30)	utf8mb4_general_ci		No	None			Change Drop
8	date	timestamp			No	current_timestamp()	ON UPDATE CURRENT_TIMESTAMP()		Change Drop
9	remarks	text	utf8mb4_general_ci		No	None			Change Drop

username	cname	paid	due	total	item_name	item_type	date	remarks
7654085237	Prayash	335	45	380	php	Book	2021-07-16 21:12:05	NULL

Fig. 16 Structure of customer table

CONCLUSION

So, the inference from this Ledger project is that no application can be permanent in the market unless it is not getting time-to-time maintenance and updates which are required. There is many more improvement is required to start competing with similar existing applications. And we need not have to worry too much about the product, because every successful application needs a long run to be reliable among audience. Before this project, I don't know anything about HTML, CSS, JavaScript, php and how to link MySQL at back-end in the project. But now, I have knowledge of these things along with how to write **README.md** which is very important for software projects and how to write good documentation of the project.

ACKNOWLEDGEMENT

I would like to extend my deepest gratitude to my professor Dr K.S Kuppusamy sir who gave me the golden opportunity to do this wonderful project of my own choice on "Ledger", which also helped me in doing a lot of research and I came to know about so many new things.

I must also thank Pondicherry University & its faculties for providing online library books, resources and helping me wherever I got stuck. Last but not least, I acknowledge the valuable suggestions and help of my classmates, family and friends, without them I certainly would have very difficultly in making this Ledger project. The completion of this project gives me much more pleasure.
